QUESTION 1

A security audit has determined that your web application is vulnerable to a cross-site scripting attack. Which of the following measures are appropriate when building a security policy? (Choose 2)

- A. Cookie length must be restricted to 1024 bytes.
- B. Attack signature sets must be applied to any user input parameters.
- C. Parameter data entered for explicit objects must be checked for minimum and maximum values.
- D. Parameter data entered for flow-level parameters must allow some meta-characters but not others.

Correct Answer: BD

QUESTION 2

Which of the following statements are correct regarding positive and negative security models? (Choose 2)

- A. Positive security model allows all transactions by default.
- B. Negative security model denies all transactions by default.
- C. Negative security model allows all transactions by default and rejects only transactions that contain attacks.
- D. Positive security model denies all transactions by default and uses rules that allow only those transactions that are considered safe and valid.

Correct Answer: CD

QUESTION 3

Which of the following methods of protection operates on server responses?

- A. Dynamic parameter protection
- B. Response code validation and response scrubbing
- C. Response code validation and HTTP method validation
- D. HTTP RFC compliancy check and meta-character enforcement

Correct Answer: B

QUESTION 4

Logging profiles are assigned to?

- A. HTTP class

- B. Security policies
- C. Web applications
- D. Attack signatures

Correct Answer: C

QUESTION 5

A client sends a request to a virtual server <http://www.foo.com> configured on the BIG-IP ASM System. The virtual server has an HTTP class profile associated with Application Security enabled, all class filters set to match all, and a pool consisting of [foo.com](http://www.foo.com) members. The virtual server also has a default pool associated with it. When the client sends a request for <http://www.foo.com>, this traffic will be forwarded to which of the following?

- A. The fallback host
- B. The default pool
- C. The HTTP class profile pool
- D. The request will be dropped

Correct Answer: C
